

Japan Tsunami Marine Debris

Tsunami Shoreline Monitoring Partners

(updated 01/08/14)

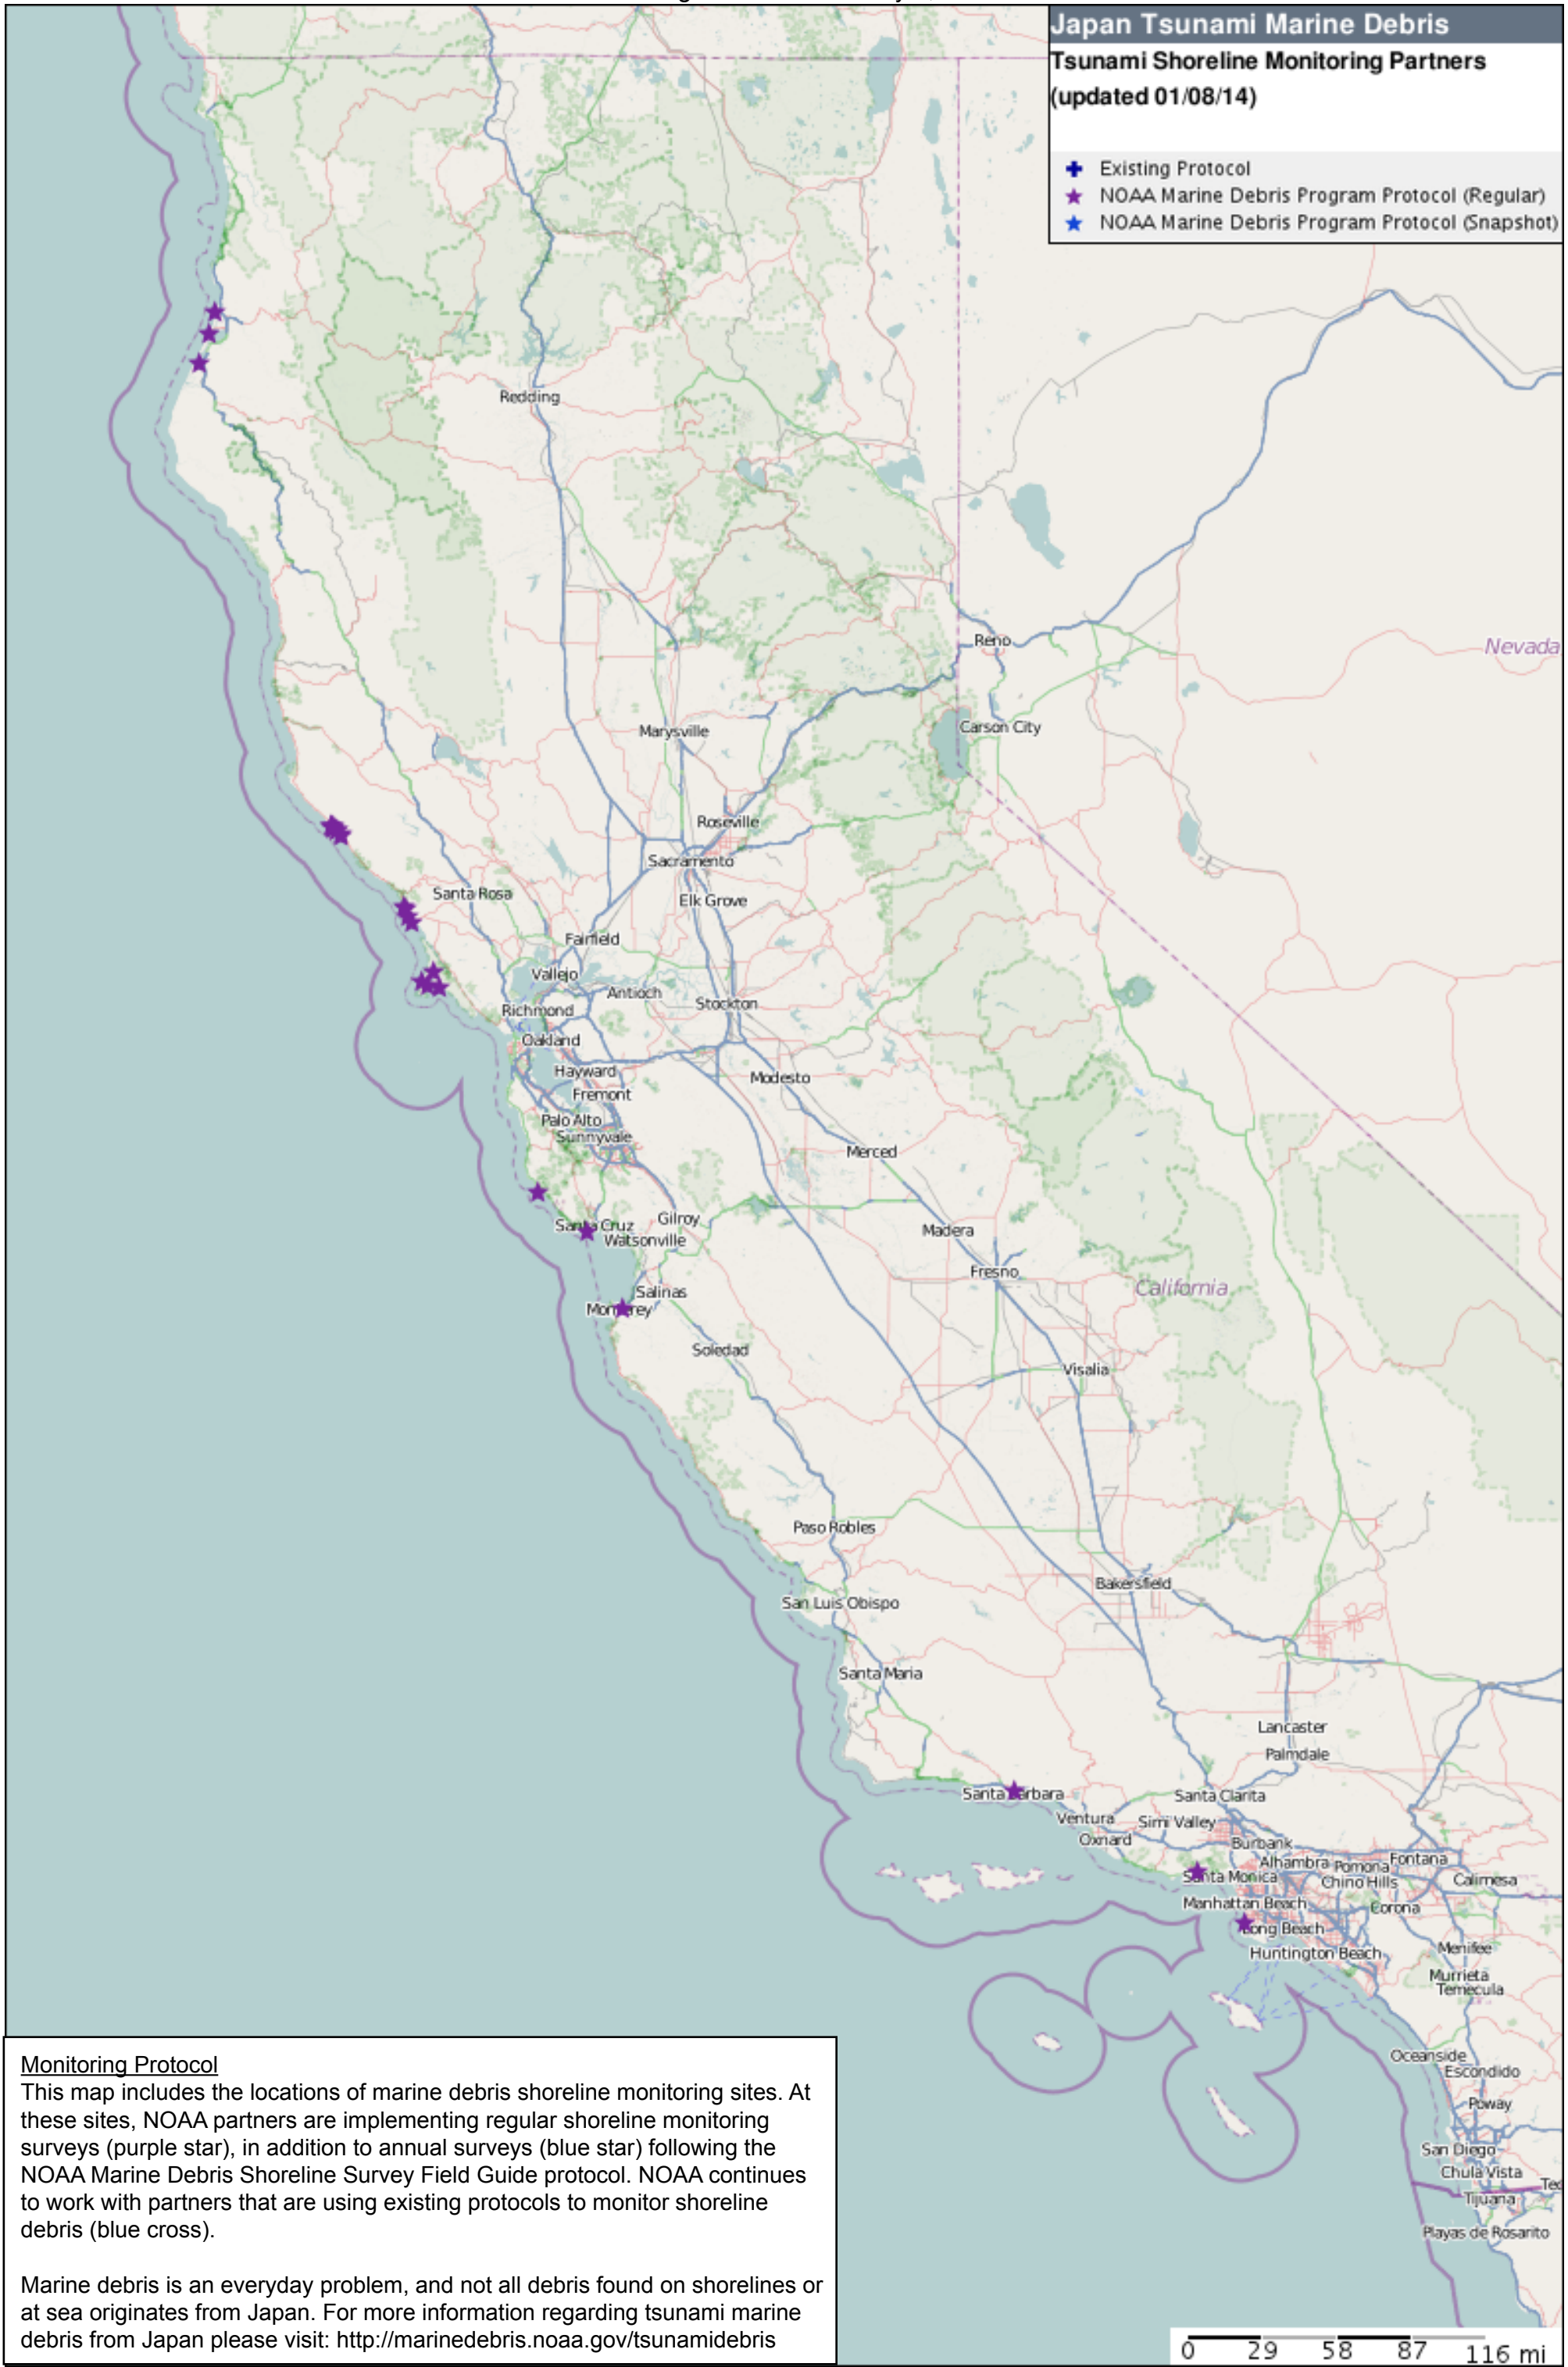

- ✦ Existing Protocol
- ★ NOAA Marine Debris Program Protocol (Regular)
- ★ NOAA Marine Debris Program Protocol (Snapshot)

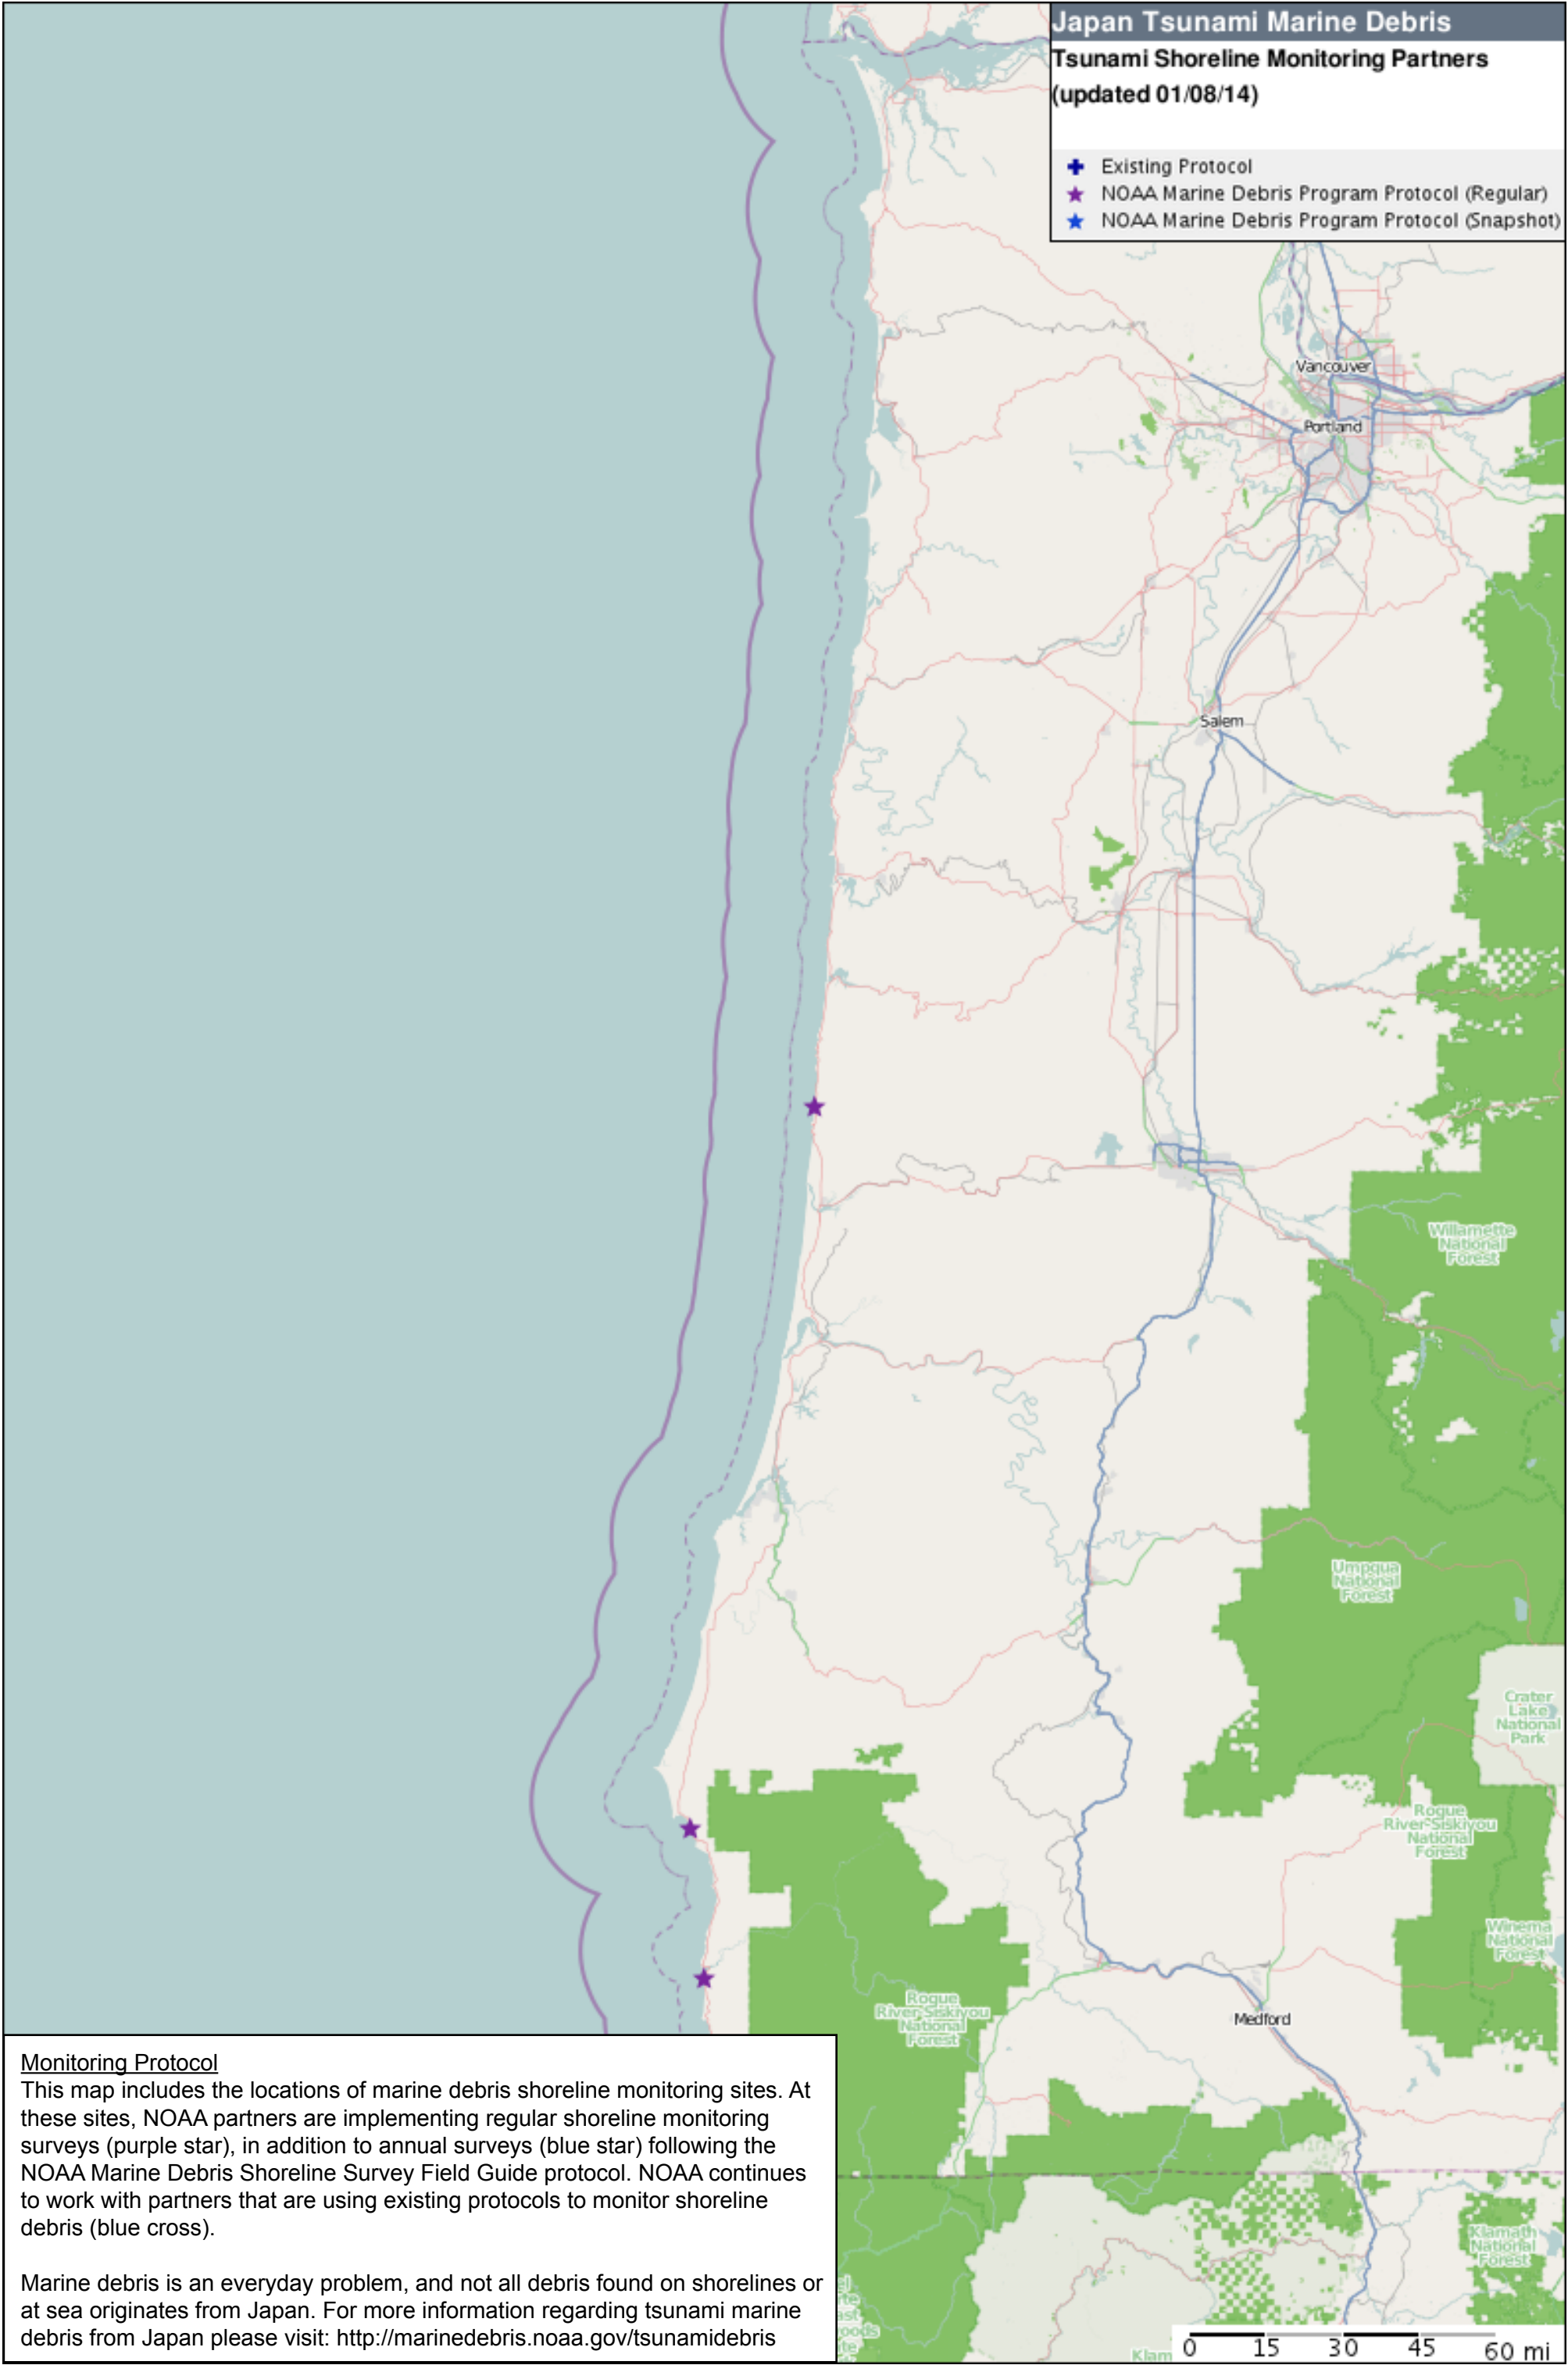

**Monitoring Protocol**

This map includes the locations of marine debris shoreline monitoring sites. At these sites, NOAA partners are implementing regular shoreline monitoring surveys (purple star), in addition to annual surveys (blue star) following the NOAA Marine Debris Shoreline Survey Field Guide protocol. NOAA continues to work with partners that are using existing protocols to monitor shoreline debris (blue cross).

Marine debris is an everyday problem, and not all debris found on shorelines or at sea originates from Japan. For more information regarding tsunami marine debris from Japan please visit: <http://marinedebris.noaa.gov/tsunamidebris>
